

At Frimstone Ltd our main business is aggregate extraction, waste recycling, recovery, restoration and transport of materials in the East Anglia Region. Our services include:

- The supply of a wide range of construction materials to trade and domestic customers;
- Recycling of construction and demolition waste across several of our quarry sites;
- Quarry restoration through infilling with inert materials;
- Processing of residual waste to produce Refuse Derived Fuel (RDF);
- A full delivery service of all aggregates and collection service for waste.

In recognising that our work in these areas may impact the environment, we are committed to reducing this impact wherever possible, through:

- Ensuring environmental performance through implementation and certification of an effective environmental management system compliant with ISO 14001; 2015
- Continual improvement and prevention of pollution;
- Ensuring an ongoing level of management that is appropriate to the nature, scale and environmental impacts of our activities, products and services;
- Complying with relevant environmental legislation, and with other requirements to which the organisation subscribes;
- Monitoring the energy, fuel usage and waste produced from our activities
- Providing the framework for setting and reviewing environmental objectives and targets;
- Ensuring that the policy is documented, implemented, maintained and regularly reviewed (at least annually);
- Communicating the policy to all employees;
- Making the policy available to customers and the public.
